EXPERIENCE SUMMARY:

Senior Software Engineer (A3) | EPAM Systems | April 2024 – Present

- Delivered a high-throughput Annuity-Contract **microservice** with 8 Mbps throughput, achieving less than **300ms p99 latency** and **99.99% availability**.
- Improved system observability and throughput by 20% by engineering a centralized gateway microservice.
- Integrated frontend applications with GraphQL APIs and gRPC-backed services, ensuring efficient data-fetching and reliable contracts.
- Built complex, modular React UI systems supporting large-scale products and micro-frontend-style architectures.
- Resolved critical authentication issues by refactoring the EDJO Annuities React frontend with a new auth library.
- Led **5-member team**, designed and delivered frontend modules using (React + micro frontends) with advanced routing, caching, and bundle optimization.
- Designed and delivered **complex frontend modules** using **React**, supporting micro-frontend architecture with advanced routing, caching, and bundle optimization.
- Built **reusable UI utilities and shared component libraries**, improving developer velocity and reducing duplicated logic across teams.
- Led frontend development for critical customer-facing flows, collaborating closely with **architects and product managers** to translate requirements into implementation-ready specs.
- Refactored authentication and session management using modern OAuth2 flows, significantly improving **security and maintainability**.
- Improved frontend observability and performance through profiling, lazy loading, and optimized rendering paths.
- Championed **feature flags (LaunchDarkly)** for safer rollouts, reducing production incidents by **40%**.

Associate Consultant | GlobalLogic | November 2021 – April 2024

- Led and mentored **5 frontend engineers**, enforcing standards for **performance, accessibility, and testing**.
- Built and scaled **large React-based account management modules** for Verizon, supporting complex user flows and integrations.
- Architected and delivered **Reliability Modeler and FMECA UI systems** for Hitachi, enabling data-driven reliability analysis workflows.
- Reduced page load time from 3.0s → 0.9s using code splitting, lazy loading, and memoization.
- Architected a **scalable design system**, reducing bundle size by **35%** and improving UI consistency across projects.
- Integrated UI layers with **GraphQL-based data services**, enabling flexible, UI-driven querying.
- Delivered **AI-assisted UI features**, consuming backend responses powered by **OpenAI / Google GenAI** services.
- Maintained Lighthouse scores ≥90 and accessibility/test coverage ~90%.

Senior Software Engineer 2 | ZEMOSO Technologies | March 2021 - October 2021

- Developed complex UI workflows for transaction-heavy systems for eBay, reducing user errors by 50%.
- Delivered multiple features ahead of schedule by quickly adapting to internal UI frameworks.

Member of Technical Staff | athenahealth | October 2019 - March 2021

- Improved stability and performance of **athenaCollector**, a high-traffic healthcare billing application handling **~10M hits/day**.
- Resolved **50+ UI and integration issues**, improving reliability, accuracy, and user experience.
- Independently delivered a complete React application within a single sprint, from design to production.

Lead Engineer | HCL Technologies | June 2019 - October 2019

- Cut deployment time by 50% by migrating monolithic UIs to a **microservices-based architecture**.
- Saved recurring licensing costs by replacing SafeNet API with a custom-built authentication layer.

Software Engineer | Temenos | February 2019 - May 2019

- Conducted product analysis and provided customer support.

Senior Software Engineer | TPF Software Inc | November 2015 - January 2019

- Developed internal tools using **Java Spring Boot**, adopted by multiple teams.
- Contributed to Travelport-related systems, supporting travel and booking workflows.
- Played a key role in zTPFGI product development, building scalable backend and UI utilities.
- Automated deployment workflows with Jenkins and Ansible, reducing manual intervention.
- Improved performance of task tracking systems by optimizing algorithms for time and memory.

TECHNICAL SKILLS:

Category	Skills
PROGRAMMING LANGUAGE	Java, JavaScript (ES6+), TypeScript, HTML5, CSS3
FRAMEWORKS	React, NodeJS, Redux, Express, Spring Boot, Jest, Enzyme, JUnit
DATABASES	PostgreSQL, MongoDB, GraphQL
CLOUD & INFRA	AWS (Lambda, EC2, Elastic Beanstalk), Terraform, Kafka Messaging Queue
DEVOPS & TOOLS	Jenkins, GitHub Actions, LaunchDarkly, Storybook, Jest/RTL, Redux-Saga, Webpack/Vite, Copilot (AI-assisted dev), CodeBuild, CodePipeline, Ansible, Chef, VS Code
GEN AI	Github Copilot, LangchainJS, Open AI, Google GenAI API, Milvus DB

ACADEMIC DETAILS:

- B.E. (Computer Science), MVJ College of Engineering Bangalore, 2015.
- 12th Standard (Physics, Chemistry, Maths, Computer Science), Kendriya Vidyalaya No 1, Delhi Cantt-10, 2010.
- 10th Standard, Kendriya Vidyalaya No 1, Delhi Cantt-10, 2008.

OTHERS:

- Set up full CI/CD for personal backend projects using AWS Beanstalk, CodeBuild & CodePipeline.
- Hosted React frontends on AWS Amplify for fast and automated deployment.
- Automated EC2 infrastructure configuration using Ansible and Chef.
- Learning NextJS and NestJS.
